

Rossano Veneto, 12th June 2019**TO ALL OUR CLIENTS****SUBJECT: NEW EDITION OF ISO 10243 STANDARD.****Kind Customer,**

We inform you that entered into force the ISO 10243:2019 standard and that our company has already adapted to it.

The edition of 2019 of the ISO 10243 standard features some minimal variations of the rigidity of some springs, in comparison with the past editions. If you were to print new catalogues or update your website, please keep this into account.

Given the size of our stock of springs ready to be delivered, it is necessary to consider a certain time lapse during which springs can be supplied in conformity with the old version of the ISO standard. The duration of this overlap may vary depending on the code, since there are, as is known, sizes of springs much more sold than others.

The text of the ISO 10243:2019 standard can be downloaded in the ISO website.

Best regards,

Franco Brunello
